Guaranteed for thirty years, the titanium based steel baths of Collection No. 228 are of wholly sustainable production with the highest quality and most hygienic finish. Providing the durability, feel and heat conductivity of cast iron without the cumbersome weight, costly at the job site and in the more far reaching impact of emissions on the environment; the No. 228 product is remarkable for ease of handling and enduring quality.

The collection includes styles classic and modern, in an extensive array of shapes and configurations. The range has received numerous awards for innovative design in both aesthetics and function. The collection is diverse in features such as the unique upstand technique which eliminates the need for silicone with a seamless integration into a tiled wall; height adjustable leveling cradle support system for ease of installation; fully integrated enamelled steel panels as well as optional glass, steel, and aluminum surrounds; invisible overflows and whirlpool systems including options such as combination air and water whirl jets and LED-lighting.

For residential and hospitality environments, spaces large and small, universal design requirements and green construction, Collection No. 228 provides the product solution.

Please see the following pages for further product information, and refer to specific technical documents for products and options when ordering.

ENDURING BEAUTY

In mind of the future, the enamelled steel baths and trays of Collection No. 227 and Collection No. 228 are manufactured exclusively from the naturally based raw materials of steel, real glass and water that are available on our planet in almost inexhaustible quantities. Enamelled steel baths and trays are therefore 100% recyclable. Ultra-modern production processes enable the enamelled steel material to be transformed into an extremely durable, robust, long-lasting and recyclable product whose surface can only be destroyed by brute force.

Important features:

- Extremely sturdy thanks to the use of titanium steel
- High impact strength and toughness
- Much more durable than iron, marble or plastic/acrylic
- Long life-span with a 30 year guarantee
- Skin friendly and heat retaining material
- Colour stable and non-fading even when subjected to UV rays
- Resistant even to aggressive fluids and scouring agents
- Inorganic scratch resistant surface resistant to bacteria
- Unique sparkling GLAZE & GLAZEPLUS® surface

Enamel baths – the true warmth becomes apparent when bathing. In its dry state, enamel sometimes gives a somewhat "cooler" impression than acrylic at first touch – but what matters is heat conductivity in actual use. Having filled an enamelled steel bath with water, the excellent heat conductive properties of steel are enacted; even as time elapses while bathing, the temperature reached by the enamelled steel adds warmth to the slowly cooling water. The heat conducts through surfaces above the water level, transmitting warmth where it's needed around the neck area, and flanges used for armrests.

SKIN IS NOT JUST SKIN.
ENAMEL IS NOT JUST ENAMEL.

Beauty begins on the surface to the eye and to the touch. The GLAZE & GLAZEPLUS® enamel technology ensures superior colour brilliance as well as a visually smooth and easy-care surface. Thanks to a unique wet-in wet process, Collection No. 227 and Collection No. 228 boast the best and most attractive enamel surface, manufactured utilising ultramodern methods. The process makes for a surface particularly homogenous, ensuring easy cleaning, hygienic use and lasting durability.

The additional refinement of the existing and tried and tested enamel GLAZE surface, GLAZEPLUS® repels dirt and makes cleaning easier; the unmatched beauty of the enamel surface is extended. The crystal clear polymer film protects the bath surface from dirt and limescale by means of its water-resistant effect. Water drops drain off and limescale has no chance to deposit; the GLAZEPLUS® coating thus provides enduring protection against dirt and limescale deposits.

- Easy to clean: a soft, wet cloth is enough
- Longer intervals between cleaning
- No environmentally damaging cleaning materials required
- Environmentally friendly GLAZEPLUS®

The secret: The more thin, the more stable.

The enamel coating applied to the steel body is a type of glass. The thinner the glass, the more stable it becomes. While a glass rod easily breaks, a thin glass fibre (fibre glass) can be bent to the extreme. Five years of development has resulted in an exclusive process that achieves a maximum level of quality with a minimum level of glaze – which means no scratches, no chipping and no problems with strong cleaning products or other aggressive agents; a stable yet fine coating with a special sparkle, quality and beauty.

BEAUTY TAKES MANY FORMS.

The award winning, inspired and innovative designs of Collection No. 227 and Collection No. 228 include over 500 baths and shower trays in an array of styles, shapes and configurations – oval, circular, corner, large, small, built-in or freestanding, classic or modern – for accommodating every project, meeting a wide range of tastes and requirements. An extensive palette expands the design options, with over 1,000 colours available, from white to moss green or Bali brown, whether colour matching or selecting a unique shade.

A modern and individually controlled production process enables the manufacture of practically any shape and colour of bath or tray. The result: made-to-order items in accordance with personal requirements do not pose a problem. The length, width and depth of almost every bath can be altered to fit in with the planning considerations of individual bathroom designs: the right solution for all situations. Please contact BIS BIS to inquire into the possibilities.
